SKILLS

Go — net/http, database/sql, SQL schema design, REST, table-driven tests

PROJECT

applications-api — REST API for Job Applications

Go · net/http · SQLite · OpenAI-compatible API | 2026

- Built validated REST endpoints (create, filter, paginate, status transition) with integrity enforced by the **schema** — **UNIQUE(company, role)** plus a status **CHECK** — so a duplicate is rejected in the database and surfaced as **409**, not guarded in application code.
- Added an **LLM-backed** endpoint behind an interface: **12 s** upstream ceiling, **502** on provider failure, **503** when unconfigured, and upstream error bodies never echoed to clients.
- Covered by **table-driven tests**: validation cases, duplicate rejection through the constraint, filter/limit edges, and the model endpoint's success and failure paths.

EDUCATION

42 Amman — Software Engineering, Core Curriculum — Amman, Jordan · Jun 2025 – Present
